Education

University of Southampton

Sep. 2025 – May 2028

Bachelor of Science, Computer Science – 1:1 (Predicted)

Southampton, UK

- *Modules:* Data Management (SQL), Computer Systems, Programming (C, Python, Java), Mathematics II
- *Coursework:* Data Management – 92%, Programming II – 91%, Programming I – 82%, Technical Report – 72%

Experience

Southampton Marine and Maritime Institute (SMMI)

Jun. 2026 – Sep. 2026

Software Engineer Intern (12-Weeks)

Southampton, UK

- Built a relational SQL database now used by 300+ researchers to centralise project, organisation, and partnership data.
- Worked on a public-facing mapping website to visualise project locations as filterable, clustered geospatial pins.
- Developed a React, Typescript data entry form for administrators to submit and update project records.
- Produced system documentation to ensure long-term platform maintainability and scalability.
- Built a FastAPI and SQLAlchemy backend to handle authentication, serve project data and support geospatial queries.

Deloitte

Apr. 2026

Spring Intern – Advisory

London, UK

- Produced advisory recommendations on strategy, technology, and cyber risk for a mock music publisher.
- Presented on operational vulnerabilities, AI risks, and strategic growth to 60+ people incl. senior managers.

Code Ninjas Teaching

Jun. 2024 – Jul. 2025

Programming Instructor

Maidenhead, UK

- Taught students aged 5–16 programming, from block-based coding to JavaScript and C# development.
- Led presentations and summer workshops, using gamification to engage students of all ages.

Projects

Terrivia – Browser Geography Game | terrivia.com | *Node.js, Express, D3.js, JavaScript, HTML/CSS*

June 2025

- Built a full-stack Node.js/Express app with a JavaScript frontend, deployed live at terrivia.com.
- Integrated a zoomable D3.js world map with custom event handling for country selection and feedback.
- Designed a REST API to manage game data and difficulty modes, keeping answer logic server-side.
- Built an adaptive difficulty system with country filtering, clue selection, and time-decay scoring.

Countries Spaced Repetition App | [Website](#) | *JavaScript, HTML/CSS*

March 2026

- Noticed country-learning apps usually have poor GUIs and learning features, so built a better vanilla Javascript website to improve the experience.
- Developed a weighted spaced repetition algorithm that dynamically adjusts country selection probability using correct/incorrect ratios.
- Implemented a Levenshtein-distance fuzzy matcher with diacritic normalisation to accept near-correct answers.

Tap-to-pay Android Wallet | [GitHub](#) | *Kotlin, Jetpack Compose, Android NFC*

July 2026

- Built a Kotlin wallet demo where a card's balance is charged by tapping an NFC tag that's been programmed in the app.
- Implemented NFC reader mode with a custom private MIME record so only tags written by the app are recognised, and built an in-app flow to encode/decode payment amounts to NDEF messages.
- Persisted card data locally with Preferences DataStore, keeping balances intact across uses.

Stock News Sentiment Analyser | [GitHub](#) | *Python, Streamlit, FinBERT, Pandas*

October 2025

- Built a Streamlit app using FinBERT to compare sentiment across up to 100 news articles with 14-day NYSE stock-price movements.
- Cached API requests and model outputs, visualised trends, and calculated Pearson correlations between sentiment and price.

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, Kotlin, C, SQL, HTML/CSS

Frontend: React, D3.js, Vite.js

Backend and Data: Node.js, Express, FastAPI, SQLAlchemy, PostgreSQL/PostGIS

Developer Tools: Git/GitHub, npm, UNIX

Familiar with AI-Assisted Development Tools: Claude Code, Codex, Copilot
